

AZRA NUR TEKBAS

Sakarya University –Computer Engineering (2022 – 2026)
Current GPA: 3.03

Computer Engineering graduate specializing in Generative AI. Experienced in voice technologies such as text-to-speech, voice cloning, and AI dubbing, as well as image and video generation. Passionate about applying generative models to real-world, production-level products.

SKILLS & COMPETENCIES

Generative AI & Voice Technologies

- TTS Model Fine-tuning & Voice Cloning, Audio Denoising & Enhancement, Speech Synthesis Pipelines, Multilingual & Natural Prosody Generation

Image & Video Generation

- Image-to-Image & Image-to-Video Generation, Automated Video Pipelines (n8n, Heygen, ElevenLabs), AI-Generated Advertisement Content

Computer Vision

- OpenCV, YOLO, TensorFlow, CNNs, Object Detection & Tracking, Data Labeling

Software Development & Tools

- Python, C, C++, C#, JavaScript, SQL (PostgreSQL, MongoDB), HTML/CSS, ASP.NET Core/MVC, REST APIs, React Native, Git

Soft Skills

- Team Leadership, Project Coordination, Technical Communication, Problem Solving

LANGUAGES

English: B2

Spanish: A2

EXPERIENCE

AI ENGINEER INTERN

NeviTech – Istanbul,Turkey (02/2026 – 09/26)
Long-term internship on Generative AI and Turkish Text-to-Speech systems. Took part in the full Turkish speech data collection process recording, cleaning, and preparing datasets and contributed to fine-tuning multiple TTS models for voice cloning and natural prosody. Worked on audio processing and denoising pipelines to improve output quality. Also contributed to a video advertisement project, experimenting with image-to-image and image-to-video generation models to produce ad content.

AI ENGINEER INTERN

Voiser AI – Istanbul,Turkey (07/2026 – 08/2026)
Working on Generative AI and speech technologies, focusing on TTS, voice cloning, and AI dubbing. Contributing to speech synthesis and audio processing pipelines to improve voice naturalness, pronunciation, and multilingual speech generation.

BOARD MEMBER

AI Community – Sakarya (09/2023 – 08/2025)
Served as Secretary of the Sakarya University Artificial Intelligence Community, organizing AI-focused trainings, workshops, and conferences, and coordinating participation in AI competitions.

VOLUNTARY INTERNSHIP

BILSOFT – Düzce, Turkey (01/2025 – 02/2025)
Completed a 20-day voluntary internship during the semester break, working on an ASP.NET MVC project.

PARTICIPANT

Erasmus+ Project – Nuremberg, Germany (05/2025-05/2025)
Participated in a technology-focused Erasmus+ program promoting digital citizenship, media literacy, and youth engagement in policymaking.

DIGITAL MEDIA INTERN

Sakarya Governorship – Sakarya, Turkey (04/2025 – 07/2025)
Managed and maintained the official websites of the Sakarya Governorship, handling content updates, technical maintenance, and digital communication across platforms.

PROJECTS

AI Advertisement Generation Pipeline (Brandifier): Worked on AI-driven creative production workflows for advertising, experimenting with image and video generation models such as Nano Banana, Seedream, FLUX, Kling, and Seedance through platforms like fal.ai. Developed image-to-image and image-to-video workflows, focusing on reference-based generation, prompt engineering, visual consistency, and output optimization for high-quality marketing content.
Automatic Dubbing & Subtitle Generation System: An end-to-end system that takes a video or audio source, detects and translates the spoken dialogue, generates natural-sounding dubbed audio in the target language, and produces time-synced subtitles. The goal is to automate the localization and dubbing process, which is traditionally done manually, by combining speech recognition, translation, and TTS-based voice generation into a single pipeline.
Emilia: A high-fidelity Turkish speech synthesis pipeline. Fine-tuned TTS models on a self-collected Turkish speech dataset for voice cloning and natural prosody. Also built a multi-stage audio denoising pipeline to achieve studio-grade output quality.
Film/TV Script Analysis Tool: An AI tool that processes film and TV scripts. It detects characters and generates character-based summaries, along with season and episode-level synopses, turning long scripts into a structured and readable format.
IELTSGo: A practice platform that lets users prepare for the IELTS exam before taking the real test. Covers all four sections with real-exam-style simulations, automated scoring, and personalized feedback so users can track their progress.
AAHaber: A project focused on gamifying and virtualizing a news website experience. Added game-like elements such as points, badges, and interactive engagement features to a news platform.
